

Instructions for Project SEE Star Wheels cont:

Star Wheel #1 shows a variety of star patterns visible throughout the year. Each star pattern is numbered and the star wheel pattern code tells you the name of each star pattern.

Rotate the star wheel to see which star patterns are visible during each season.

Star Wheel #2 uses the same star patterns as Star Wheel #1 but also adds in different symbols for the ten brightest stars. Use the symbol chart for Star Wheel #2 to identify these star names.

Since each star wheel is the same size, you can swap star wheels or just make a second star wheel holder.

Many people use star wheels, like these, to learn to identify star patterns.

We hope that you enjoy these star wheels as you make your own explorations of the night sky!
